- Ready-to-install direct replacements – no programming required!
- Re-engineered with upgraded materials (where possible)
- Completely remanufactured and tested

### A BETTER HYBRID BATTERY SOLUTION

TYPICAL OE DEALER OR NICHE BATTERY PROVIDER	DORMAN OE SOLUTIONS HYBRID PROGRAM
Spotty availability and coverage, generally confined to one vehicle make	Broad offering of the most popular hybrid makes and models on the road today
Typically original equipment batteries have very high replacement costs	Priced competitively to the OE Dealer and current specialty replacement alternatives
In some cases, time must be spent removing and reusing parts (such as ECU module) from the old battery and installing them onto the replacement battery	Direct replacement program that arrives ready to install ('plug and play')
On certain applications, additional time and expensive programming tools are required to reprogram replacement modules	No programming required, replacement battery arrives ready-to-install right out of the box
Copper bus bars commonly used, leading to frequent corrosion and eventual battery failure	<b>DORMAN Engineered</b> For Toyota applications, bus bars upgraded to nickel plating to reduce corrosion

Safety is an important concern when working with the electrical systems of hybrid vehicles, particularly when removing and installing hybrid vehicle batteries. Because of the high voltage that the batteries generate, removing and installing hybrid batteries is an inherently dangerous activity and can lead to serious or even fatal injuries. Suitable training is essential before removing, installing, or servicing this product which should only be attempted by a qualified technician.
